Dear Messrs. Nussbaum and Lininger,

Corrective Action Condition X. of the February 26, 2011 Missouri Hazardous Waste Management Facility Part I Permit requires submittal of annual progress reports by March 1 of each calendar year for current corrective action activities, activities undertaken in response to newly identified Solid Waste Management Units (SWMUs) and Areas of Concern (AOCs), and activities undertaken in response to newly identified releases from previously identified SWMUs and AOCs. While the letter report was prepared prior to March 1, obviously we did not submit when ready. Our apologies, and assurance next year's submittal will be on schedule.

*Description of work completed*

- The existing decontamination station for the Blast Furnace Feed Storage Building was closed. A closure report describing these activities will be submitted soon.
- The Lead Sulfate Paste Holding Tank was closed and a closure report submitted to MNDR on October 4, 2013.
- No additional SWMUs or AOCs were discovered in 2013.

*Summaries of all findings, including summaries of laboratory data*
